Comparative Performance Analysis

Goalkeeper

Frauen-Bundesliga 25/26

CARA BÖSL
1. FC UNION BERLIN

She was born on 11 February 1997 and is currently 29 years old. She stands at 1.73 metres tall, is German by nationality, plays primarily with her right foot, and has an estimated market value of €65,000.

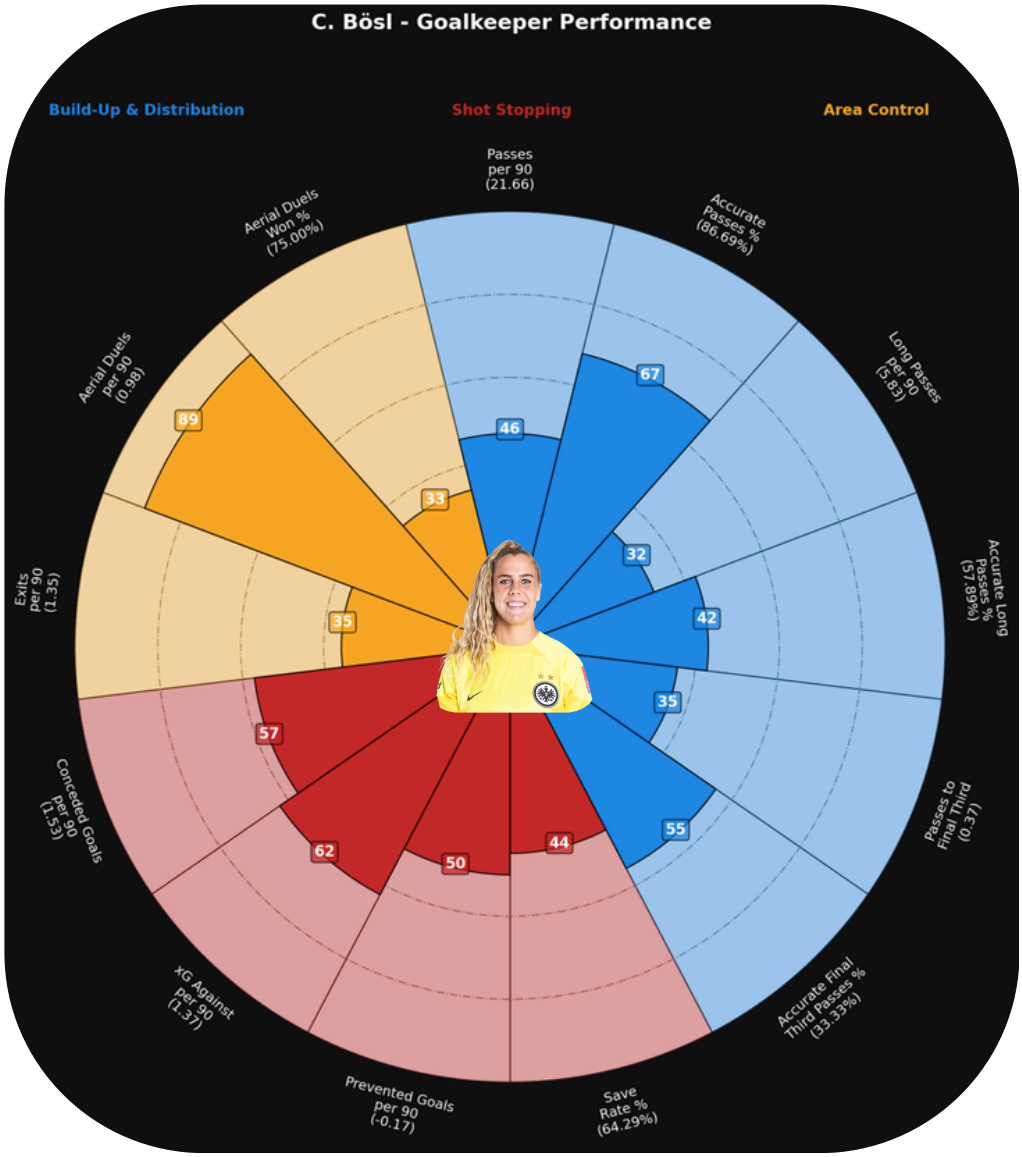
LAURA DICK
TSG 1899 HOFFENHEIM

She was born on 13 June 2003 and is currently 22 years old. She stands 177 cm tall, is German by nationality, plays primarily with her right foot, and has an estimated market value of €80,000.

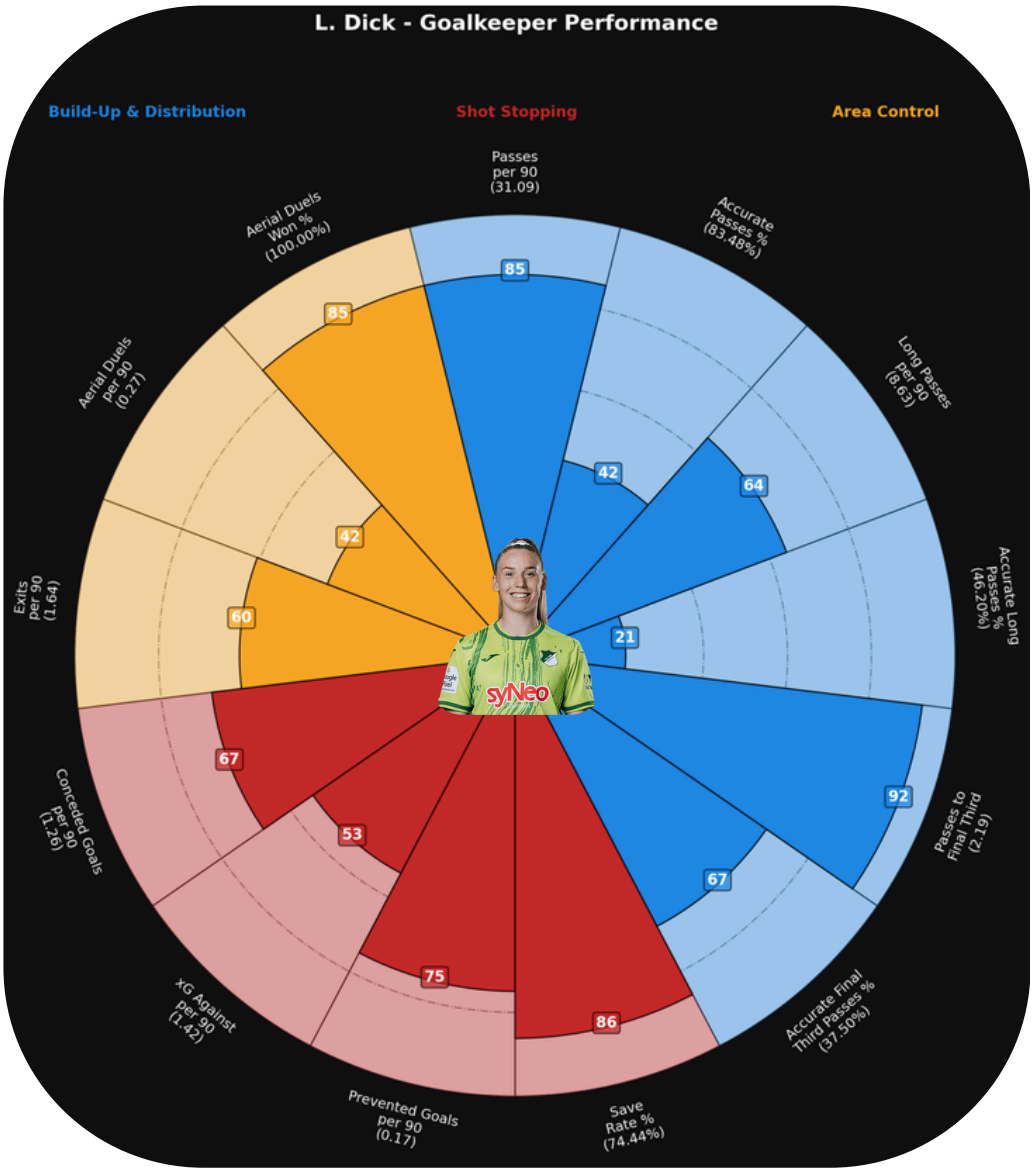
The comparative analysis between the two goalkeepers was structured around three primary performance domains that reflect the modern goalkeeper role: Build-Up & Distribution, Shot Stopping, and Area Control. Build-Up & Distribution (visualised in blue on the radar charts) evaluates involvement in possession, passing volume, accuracy, progression into the final third, and long distribution capacity—critical for teams operating with structured build-up or high defensive lines. Shot Stopping (highlighted in red) measures defensive impact through save percentage, goals prevented relative to expected goals, goals conceded per 90, and overall shot prevention efficiency—capturing the goalkeeper's core defensive value. Area Control (displayed in orange) assesses aerial duels, exits, and penalty-area command, reflecting physical presence and dominance in cross-heavy or transitional situations. By segmenting performance into these three colour-coded domains, the comparison ensures clarity between in-possession contribution, reactive defensive output, and proactive area management, allowing for a holistic yet role-specific evaluation.

Goalkeeper Analysis

Build-Up & Distribution	Shot Stopping	Area Control
Passes volume and Accuracy	Save %	Aerial Duels Volume
Long Pass Volume and Accuracy	xG Against	Aerial Duels Win Rate
Pass to Final Third Volume and Accuracy	Prevented Goals	Exits per 90



Cara Bösl profiles as a physically assertive and proactive goalkeeper whose strengths are most evident in her penalty-area command and aerial presence. In possession, she operating as a minimal passing option, when required - maintaining solid passing accuracy, though her involvement is generally more measured and less progressive compared to high-volume distributors. Out of possession, she stands out as a commanding area keeper, showing confidence coming off her line to claim crosses and attack high balls. She is suited to dealing with direct play and cross-heavy phases, using strong timing and positioning in aerial duels. Her reflex-based shot-stopping metrics are comparatively lower, but still within average - suggesting she remains structurally reliable within organised defensive systems. Overall, her profile suggests a goalkeeper well-suited to teams that value penalty-area dominance, and physical control in transitional scenarios.



Laura Dick profiles as a well-rounded, tactically flexible goalkeeper who can contribute consistently across all phases of the game. In possession, she operates comfortably as a **build-up-oriented sweeper keeper**, showing confidence playing short and through the thirds, supporting circulation under pressure, and progressing the ball into advanced areas. Her accuracy metrics are lower than average - suggesting the high volume of risky passes made to help with build up. She is capable of stepping outside her box to offer a passing option and help maintain a high defensive line. Out of possession, her profile is equally strong across multiple defensive archetypes. She has the attributes to command her penalty area, deal effectively with crosses, and engage in aerial duels, while also demonstrating the positioning and resilience required in deeper, low-block scenarios. In addition, her reflex-based shot-stopping metrics indicate she can react decisively in close-range situations.

Tactical Model	Cara Bösl	Laura Dick
High Line + Possession	Elite Fit	Moderate Fit
Structured Build-Up	Elite Fit	Low Fit
Low Block System	Strong Fit	Moderate Fit
Cross-Heavy Opposition	Moderate Fit	Strong Fit

Tactical Fit

Within the Frauen-Bundesliga context, Laura Dick is optimally suited to a possession-dominant game model built on a high defensive line, structured positional play, and aggressive counter-pressing. Her profile aligns with teams that construct from the first phase, require vertical progression from the goalkeeper, and depend on the keeper to manage space behind an advanced back four. She fits environments where the goalkeeper is an active outfield contributor — facilitating circulation, breaking pressure, and supporting rest-defense structure.

In contrast, Cara Bösl is better suited to transitional, mid-to-low block systems where defensive density and aerial security are prioritized over build-up orchestration. She profiles effectively in cross-heavy leagues or physically direct competitions, where penalty-area command, assertive claiming, and second-ball management are critical. Bösl is most effective in reactive structures that defend deeper, absorb pressure, and rely on physical dominance rather than goalkeeper-led progression.
